

How To Charge the Batteries

1. Attach charger to a 12 volt power source (Car battery or 12 volt power supply). You will hear one loud beep. Note that the adaptor cable should be plugged into 2 cell position on the charger (marked with arrows). **NOTE: Do not plug the battery directly into the charger, you must use the adapter cable or damage to the charger can result.**
2. Attach the LiPo battery charging/balancing connectors to the adaptor cable. Note the alignment slots must match up.
3. Set charging amps to 1.0A by pushing the up arrow.
4. Press start button.
5. Place battery into LiPoSack.
6. When battery is charged, the charger will sound with a series of beeps. These beeps will repeat until the battery is removed from the charger.
7. Press stop.
8. Remove battery from the LiPoSack and unplug the battery from the adaptor cables.
9. Remove charger from the power source. Repeat for second battery if required.
